Professional Summary

Aspiring Software Engineer with a strong foundation in DevOps practices. Experienced in building scalable web applications and automation systems. Skilled in Python, and cloud technologies with hands-on project experience. Passionate about intelligent systems, CI/CD automation, and efficient backend development.

Technical Skills

Languages: Python, Java, JavaScript
Frontend: HTML, CSS, Bootstrap
Backend: Node.js, Express.js
Databases: MySQL, MongoDB
Tools: Git, Docker (Basics), Jenkins (Basics)
Concepts: OOP, REST APIs, CI/CD, Automation, AI Systems

Projects

AI Agent Swarm for DevOps CI/CD Automation

- Designed a multi-agent AI system to automate CI/CD workflows using Python and DevOps tools.
- Implemented intelligent agents for testing, deployment, and monitoring tasks across the pipeline.
- Reduced manual effort by automating pipeline decision-making across multiple environments.
- Integrated agents with version control systems to trigger automated builds on code commits.
- Achieved faster release cycles by enabling parallel execution of test and deployment agents.

DevOps End-to-End CI/CD Pipeline

- Designed and deployed a CI/CD pipeline integrating GitHub, Jenkins, Docker, Kubernetes, and AWS.
- Automated infrastructure provisioning with Terraform, enabling fully reproducible environments.
- Reduced deployment time by **70%** through container orchestration and automation.
- Configured multi-stage Docker builds to optimize image size and improve deployment efficiency.
- Implemented rollback mechanisms to ensure zero-downtime deployments in production.

Linux System Automation with Shell Scripting

- Created shell scripts for log monitoring, user management, disk usage tracking, and backups.
- Automated recurring tasks using cron jobs, improving overall system reliability and uptime.
- Increased operational efficiency by eliminating manual interventions in routine admin tasks.
- Developed alerting scripts to notify administrators of critical system events via email.
- Documented all scripts with usage instructions to support team knowledge transfer.

Education

Master of Technology in Computer Science Expected Graduation: 2026
VIT-AP University

Certifications

- AWS Certified Cloud Practitioner (In Progress)
- Docker & Kubernetes Essentials (Online Course)

Achievements & Activities

- Built a cloud-based deployment solution in a Hackathon, winning recognition for innovation.
- Contributed to open-source DevOps projects on GitHub through pull requests and code reviews.
- Published technical blogs on DevOps best practices reaching a wider developer community.

Soft Skills

Problem-Solving Team Collaboration Adaptability Analytical Thinking
